EDUCATION

Thapar Institute of Engineering and Technology, Patiala

2023 – 2027

B.Tech - Computer Science and Engineering - CGPA - 8.78

Patiala, Punjab

B. N. D. Senior Secondary School , Hoshiarpur

2020 – 2022

Class XII - 98.6%

Punjab

EXPERIENCE

RAIO QUANTUM (NYA)

June – August 2026

Summer Intern

Remote

- Developed an **enterprise-grade** relational schema for a multi-entity transactional system, optimizing query read paths with partial indexes.
- Built a ranked search and record-matching system (BM25 scoring, synonym expansion, Levenshtein fuzzy matching) to resolve inconsistent free-text queries, validated by **27 automated tests**.

NUMERAI

Jan – June 2026

Quantitative Analyst (Independent)

Remote

- Forecast obfuscated financial time series for a live hedge fund tournament with personal capital staked on model performance, reaching a **top 12% global rank** (278/2,303) on 60-day risk-adjusted contribution.
- Designed a regime-gated ensemble of specialist models using **cross-validation** to eliminate temporal leakage, and neutralized predictions against a benchmark to isolate genuine signal from factor exposure.

PROJECTS

Bosch Profit Diagnostic  | SQL, Excel, Power BI, Python (Pandas)

July 2026

- Diagnosed Bosch's profit paradox by analyzing why revenue increased from **€82B to €96B** while operating profit declined from **€11B to €5B**, using hypothesis-driven business analysis and KPI decomposition.
- Performed **SQL (GROUP BY, JOIN)** and pivot-based analysis to evaluate profitability across regions and product categories, identifying raw-material inflation, logistics costs, and discounting as the primary drivers of margin erosion..

Medicare Part D Spending Analysis | Python (Pandas), Matplotlib, CMS Public Data

July 2026

- Analyzed **\$240bn** of US Medicare Part D drug spending across **3,575 products** (2018-22), building a reconciled bridge splitting growth into **price, volume and mix** effects.
- Found **price, not patient volume, drove 59%** of the \$77bn increase; produced a three-scenario forecast to 2025, back-tested to a **1.7% error**.
- Developed a priority-scoring model ranking drugs on spend, price-led growth and lack of generic competition; the top-10 output **matched 3 of the 10 drugs** CMS selected for Medicare price negotiation.

Querix  | Python, React/TypeScript, LangChain, DuckDB, FastAPI

Apr 2026

- Created an analytics tool letting non-technical users query structured data in plain English, automatically generating **Plotly visualizations** and written insights from CSV/Parquet sources.
- Engineered self-healing query retries and **semantic caching**, cutting response latency from 3s to 50ms (**98%** improvement).

TECHNICAL SKILLS

Analytics: MS Excel, SQL, Python (Pandas, NumPy, Scikit-learn), R, MATLAB

Tools & Reporting: MS PowerPoint, Power BI, Matplotlib, Canva, GitHub

Methods: Forecasting, scenario & sensitivity analysis, hypothesis testing, root-cause analysis

ACHIEVEMENTS

- Excellence in Academics - **National Award** (Federation of Private Schools and Associations of Punjab)
- **Microsoft Learn Student Chapter** — Led technical execution for flagship events with **2000+ participants**, coordinating speaker outreach, logistics and cross-team delivery.
- **2x Kaggle Expert** — 17 public datasets, **14 medals**, peak **global rank #87**; 9 notebook medals.
- **Amazon Machine Learning Summer School** 2026.
- **Certifications:**
 - Data Analysis using Microsoft Excel 
 - GenAI for Business Analysis 
 - Advanced Relational Database and SQL 
 - Data Analysis with SQL – Inform a Business Decision
