

Amgen harnesses the best of biology and technology to fight the world's toughest diseases, and make people's lives easier, fuller and longer. We discover, develop, manufacture and deliver innovative medicines to help millions of patients. Amgen helped establish the biotechnology industry more than 40 years ago and remains on the cutting-edge of innovation, using technology and human genetic data to push beyond what's known today.

Role Description:

The Business Analytics & Insights Intern will support internal Amgen team in delivering data-driven insights that inform strategic and operational decision-making across commercial functions. This role partners with cross-functional stakeholders including Commercial, Value and Access, Finance, and Brand Strategy teams to analyze data, uncover trends, and translate findings into actionable insights. The role blends structured analytics, business problem-solving, and storytelling to help drive clarity on key business questions such as performance drivers, market dynamics, and growth opportunities. The intern will gain exposure to real-world pharmaceutical analytics use cases, including forecasting inputs, customer analytics, and performance tracking, while working with large and complex datasets in a collaborative global environment.

Roles and Responsibility:

1. Apply structured problem-solving and analytical thinking to understand business questions, identify key drivers, and formulate data-driven hypotheses.
2. Analyze large and complex datasets (e.g., sales data, market data, claims data, customer data) to identify trends, patterns, risks, and opportunities.
3. Support development of dashboards, reports, and analytical models that enable tracking of commercial performance and key KPIs.
4. Assist in synthesizing insights into clear, concise narratives and presentations for business stakeholders.
5. Collaborate with cross-functional teams (Commercial, Finance, Market Access) to understand business needs and translate them into analytical solutions.
6. Contribute to exploratory analyses, including segmentation, trend analysis, and scenario-based evaluations.
7. Identify opportunities to improve data quality, reporting efficiency, and analytical frameworks.
8. Demonstrate curiosity by connecting insights across datasets, functions, and business contexts to uncover deeper implications.

Tools you may use: SQL, Python, Tableau, Excel, analytics/BI dashboards, data platforms (e.g., Snowflake, Databricks), enterprise data sources (e.g., sales, claims, prescription data) and selected AI tooling.

Qualifications:

1. Master's degree (Engineering, Pharma, Biotech, Operations, Business) or bachelor's degree in a relevant field with $\geq 70\%$ or 7.0 CGPA (flexible for strong projects/internships).
2. Passion for data analysis and hypothesis-driven thinking.
3. Curious, self-driven learner who connects insights across functions.

4. Clear written and verbal communication.
5. Basic-to-strong analytical and structured problem-solving skills with understanding of analytics concepts (segmentation, trends, forecasting, KPIs).
6. Experience or willingness to work with large datasets; analytics tools knowledge is a plus.
7. Exposure to biotech/pharma or healthcare data is a plus.
